

CJC-1295 no DAC/Ipamorelin: Restoring Your Growth Hormone Rhythm

Dual-Pathway SQ + Buccal Protocol

Energy Decline Isn't Laziness — It's Biology

The Baseline:

After age 30, natural GH production drops ~14% per decade.

The Symptoms:

Energy crashes by afternoon. Recovery takes days, not hours. Body composition plateaus despite diet control.

The Reality:

Diet and exercise alone cannot fully correct a hormonal deficit.

Two Peptides, Complementary Pathways, Amplified Results

- **CJC-1295 no DAC:** Activates GHRH receptors to Sustain the release signal.
- **Ipamorelin:** Targets GHS-R1a (Ghrelin) to Amplify the pulse intensity.
- **The Synergy:** Ipamorelin primes the pump; CJC-1295 keeps the valve open.
- **Result:** 3–5× greater GH release than either peptide alone.

Molecular Precision Behind the Synergy

CJC-1295 + GHRH Receptor

Increases cAMP.
Result: Sustained duration (30+ min).

Ipamorelin + GHS-R1a

Triggers Calcium release.
Result: Immediate, sharp pulsing.

Downstream Effect: Stimulates liver to produce IGF-1 (The metabolic workhorse).

Selectivity: No cortisol or prolactin or prolactin

Restoration Across Every Biological System

	Inter	Inter
GH Axis	Dual-receptor restoration	Pulsatile rhythm normalized
Body Comp	Lipid metabolism + IGF-1	Fat reduction + lean muscle
Recovery	Amplified deep sleep (NREM)	Faster repair + joint health
Metabolic	Sustained IGF-1 (9–11 days)	Mitochondrial efficiency

Delivery Designed for Your Lifestyle

Route:	SQ Injection	Buccal Strip
Advantage:	Research-validated absorption	Mucosal absorption (bypasses GI)
Zvia Context:	Precision titration capable	Needle-free, travel-friendly

Provider determines method based on your physiology and absorption.

The Restoration Arc: A Cumulative Process

The Profile That Thrives

- Adults experiencing age-related energy or recovery decline.
- Active individuals with plateaued body composition (effort > results).
- Those prioritizing evidence-based cellular optimization.
- Bio-hackers seeking precision longevity tools.

Contraindications: Active malignancy, pregnancy, or uncontrolled diabetes.

You're Not Navigating This Alone

Labs & Protocol

Comprehensive panel (IGF-1, Metabolic) before you start.

Monitoring

Adjustments at Week 4 & 8 based on response markers.

Dual-Pathway Expertise

Synergistic blends tailored to your biology, not generic singles.

Clinical Precision Meets Genuine Relationship

- **Consultation:** 30-min deep dive vs. 10-min algorithm visits.

- **Precision Labs:** 70+ markers analyzed before protocol begins.

- **The Multiplier:** Sleep & Nutrition protocols integrated to amplify peptide effects.

- **Safety First:** Strict screening for contraindications.
