PT-141/Oxytocin/Aminophenylpyrrole:
Precision-Curated Intimacy Blend | Buccal Protocol

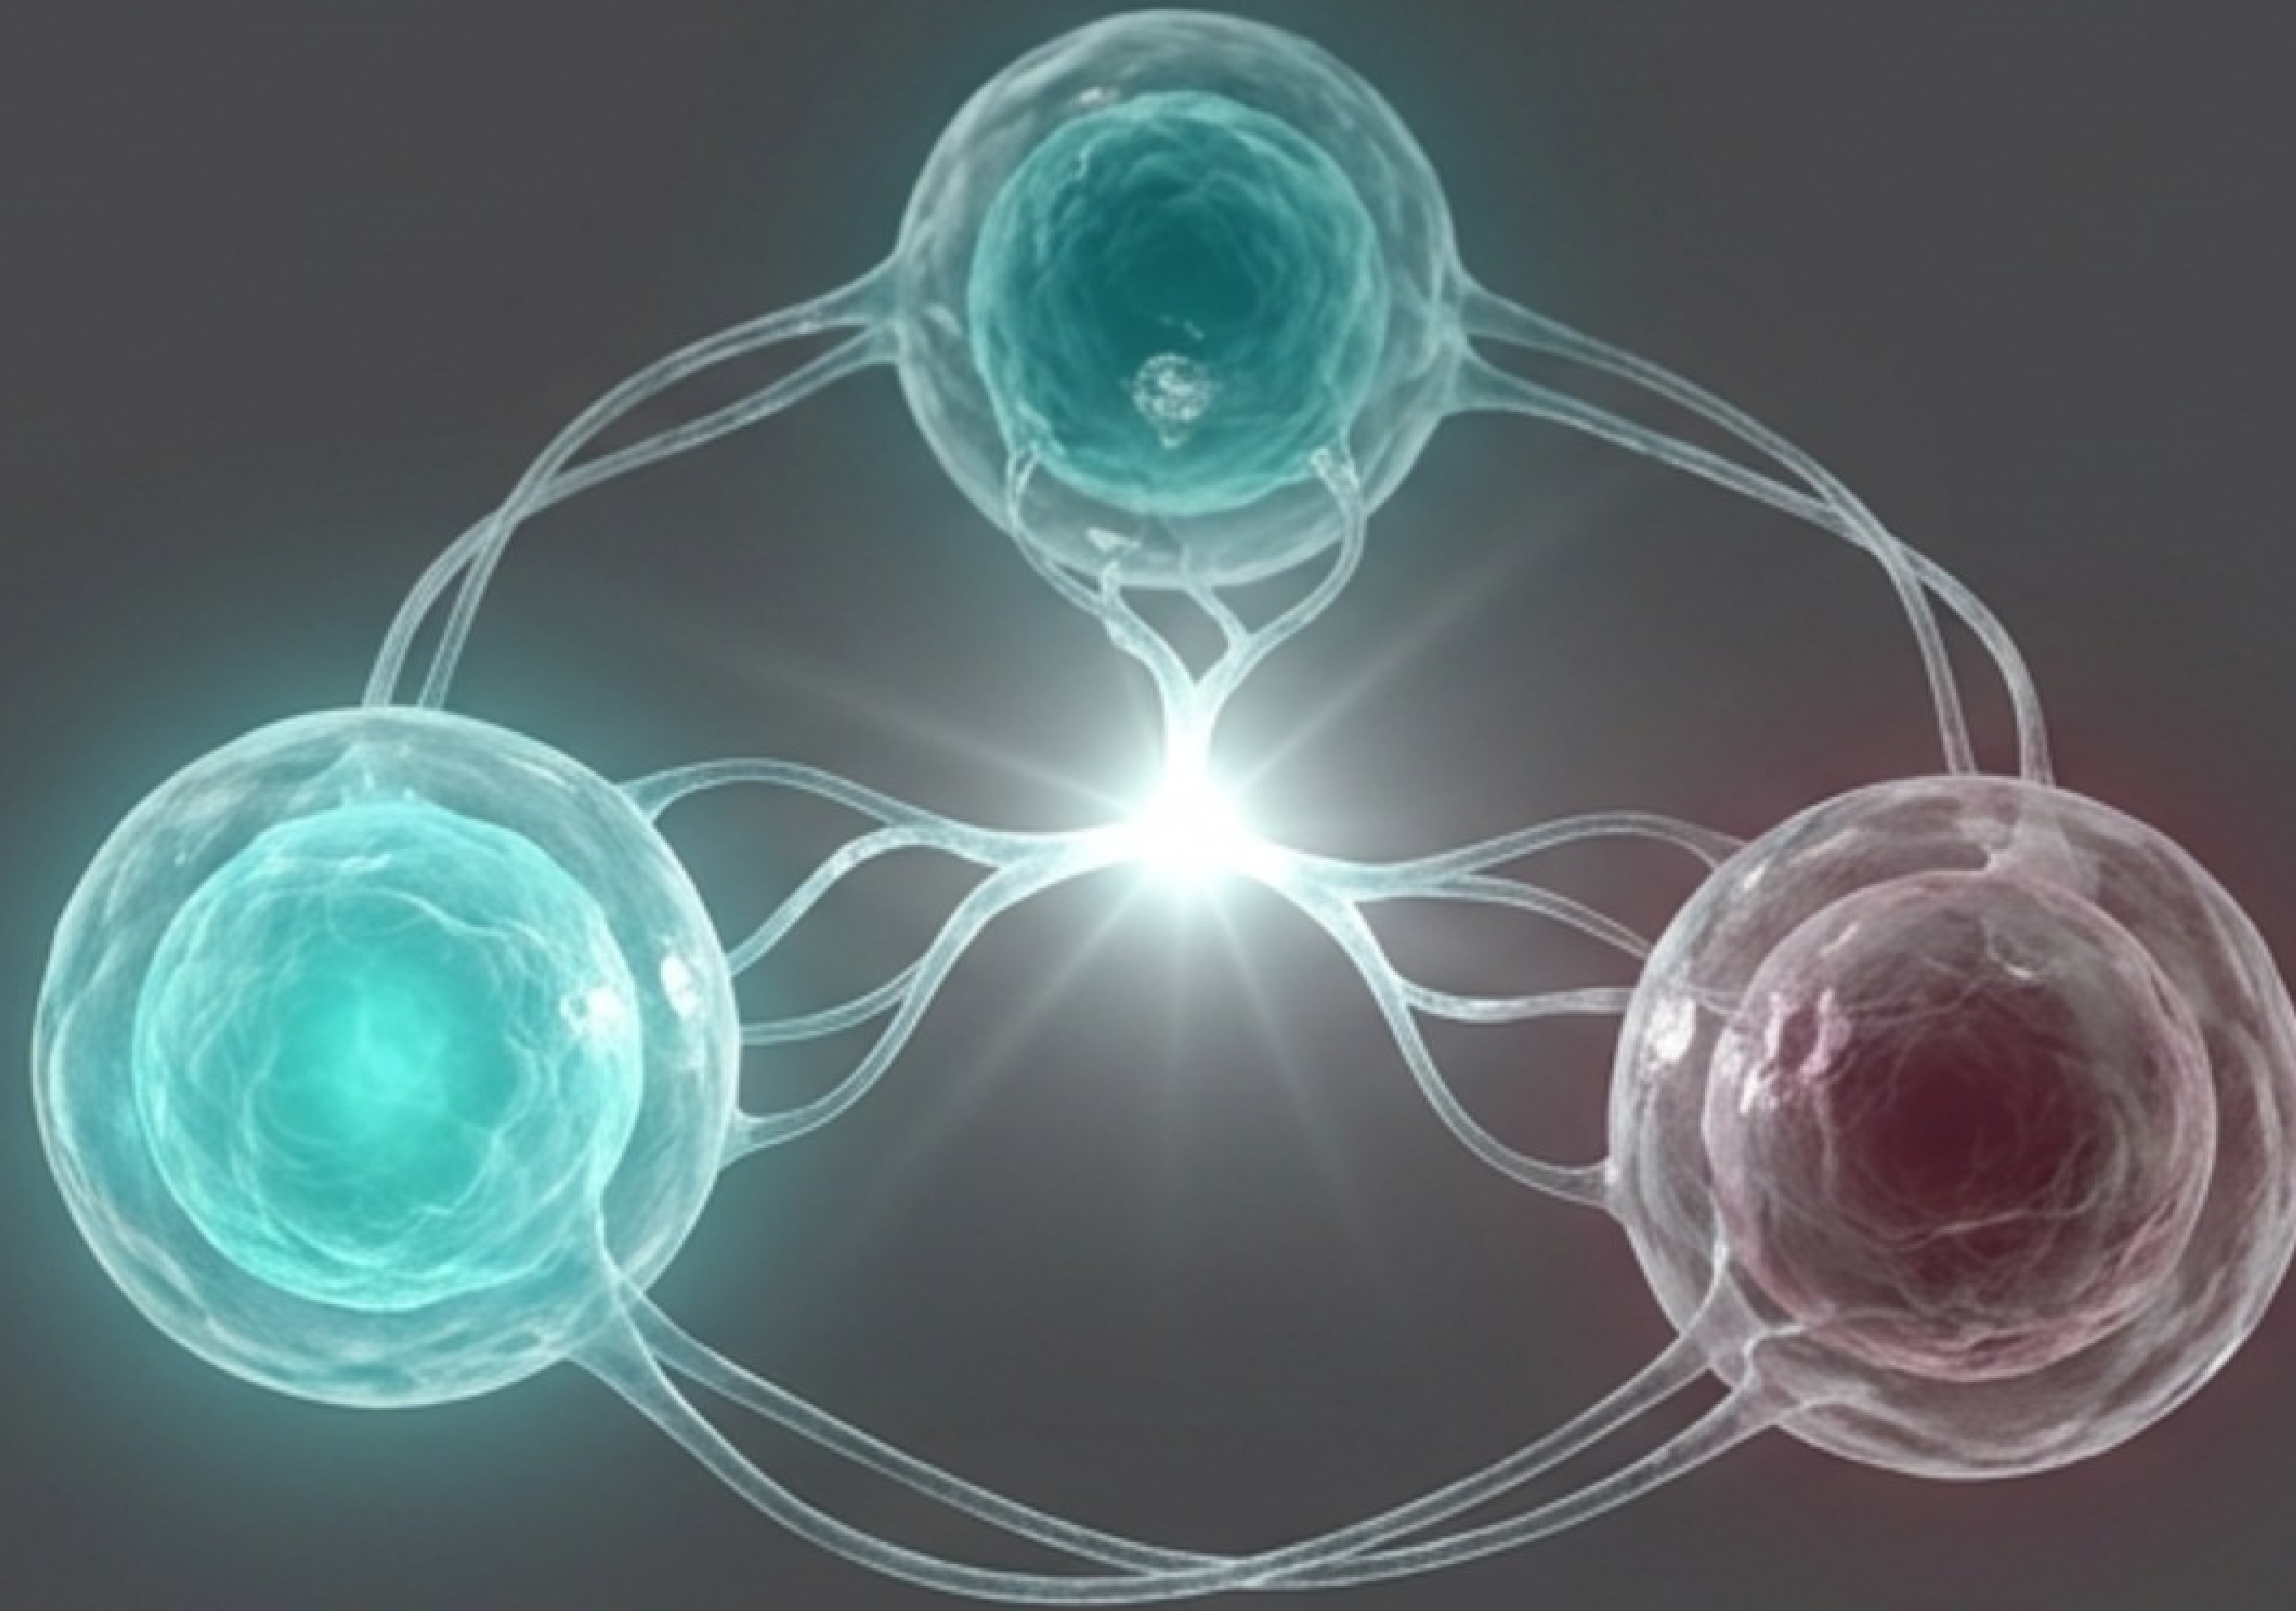

Your Intimacy Matters

- Desire distress affects 1 in 4 women; relationship strain is common and valid.
- Sexual wellness directly impacts overall life satisfaction and mental health.
- When desire quiets, it is biology—multiple systems, once synchronized, now playing out of tune.
- Many seek advanced solutions here after standard, single-agent approaches fail.

Three-Pathway Precision Solution

Intimacy Blend **engages three biological systems simultaneously**—synchronized for rapid, **durable results**.

- **CNS Arousal Activation:** Restores neurological drive via PT-141 melanocortin signaling.

- **Emotional Bonding Amplification:** Deepens partner connection via the oxytocin pathway.

- **Neural Optimization:** Protects the signaling environment and elevates mood via aminophenylpyrrole.

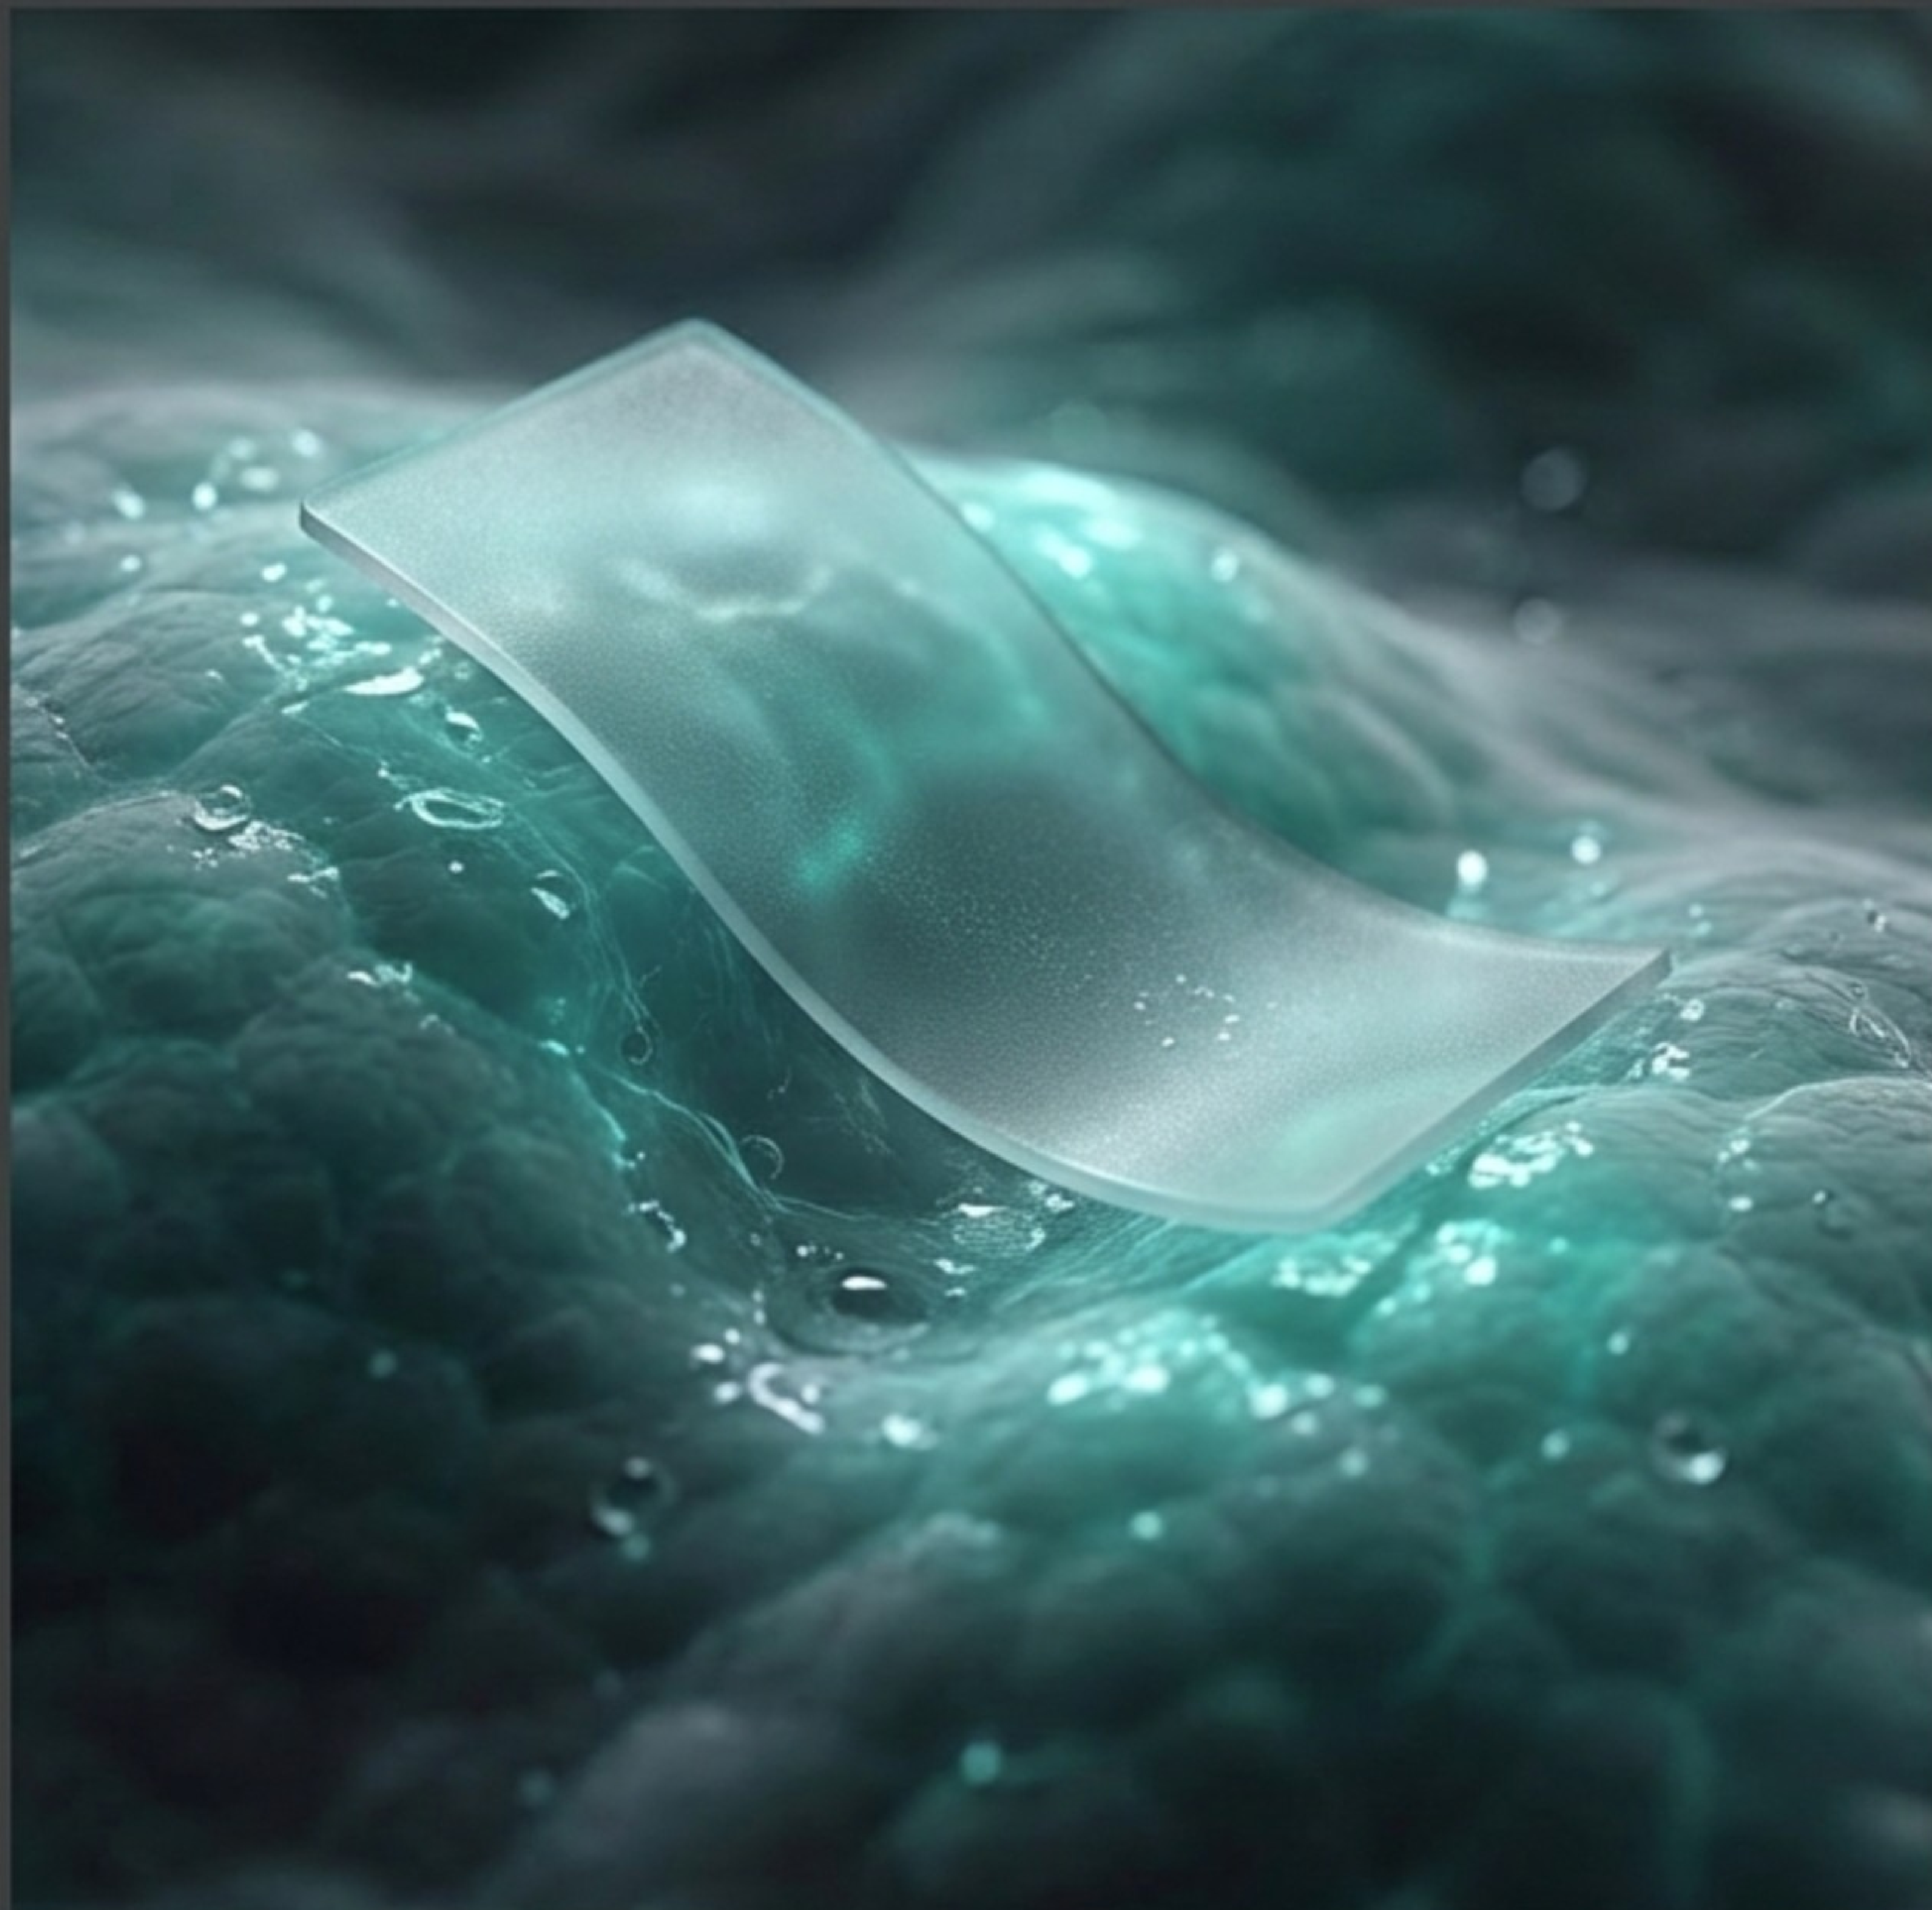

The Science Behind the Blend

- 1. PT-141 (The Desire Pathway):**
Selective MC3R/MC4R activation triggers cAMP cascades, increasing dopamine in the medial preoptic area. Restores central neurological wanting entirely independent of nitric oxide/vascular-only mechanisms.
- 2. Oxytocin (The Connection Pathway):**
Binds OXTR, activating MAPK/PKC/PLC/CaMK cascades. Amplifies mesolimbic dopamine in the VTA and nucleus accumbens (the brain's reward center), while intracellular Ca^{2+} triggers beneficial NOS activation.
- 3. Aminophenylpyrrole (The Neural Environment):** Selectively modulates nNOS/iNOS to reduce neuroinflammatory signaling. Preserves beneficial eNOS vasodilation, resulting in mood elevation, relaxation, and sensory enhancement.

Your Integrated Response

System		Action	Result
Arousal		Melanocortin + OXTR Activation	Neurological desire restored in 30–60 min
Orgasm		Oxytocin Surge + Sensory Support	86% report intensity and contentment elevated
Bonding		Mesolimbic Reward Pathway	Emotional connection and partner attraction deepened
Mood		Aminophenylpyrrole Modulation	Elevated confidence, relaxation, and sustained receptor sensitivity

Your Delivery Method

- **Needle-free:** Dissolves comfortably and completely on the buccal mucosa (inner cheek).
- **Rapid onset:** Direct mucosal absorption bypasses GI degradation; therapeutic effect in 15–30 min.
- **Travel-friendly:** Discreet, highly portable, and spontaneity-compatible.
- **Provider-guided:** Compound dosing is independently adjusted to your unique biological response.
- **Convenient:** Seamlessly integrated into private moments without clinical interruption.

Your Path to Optimization

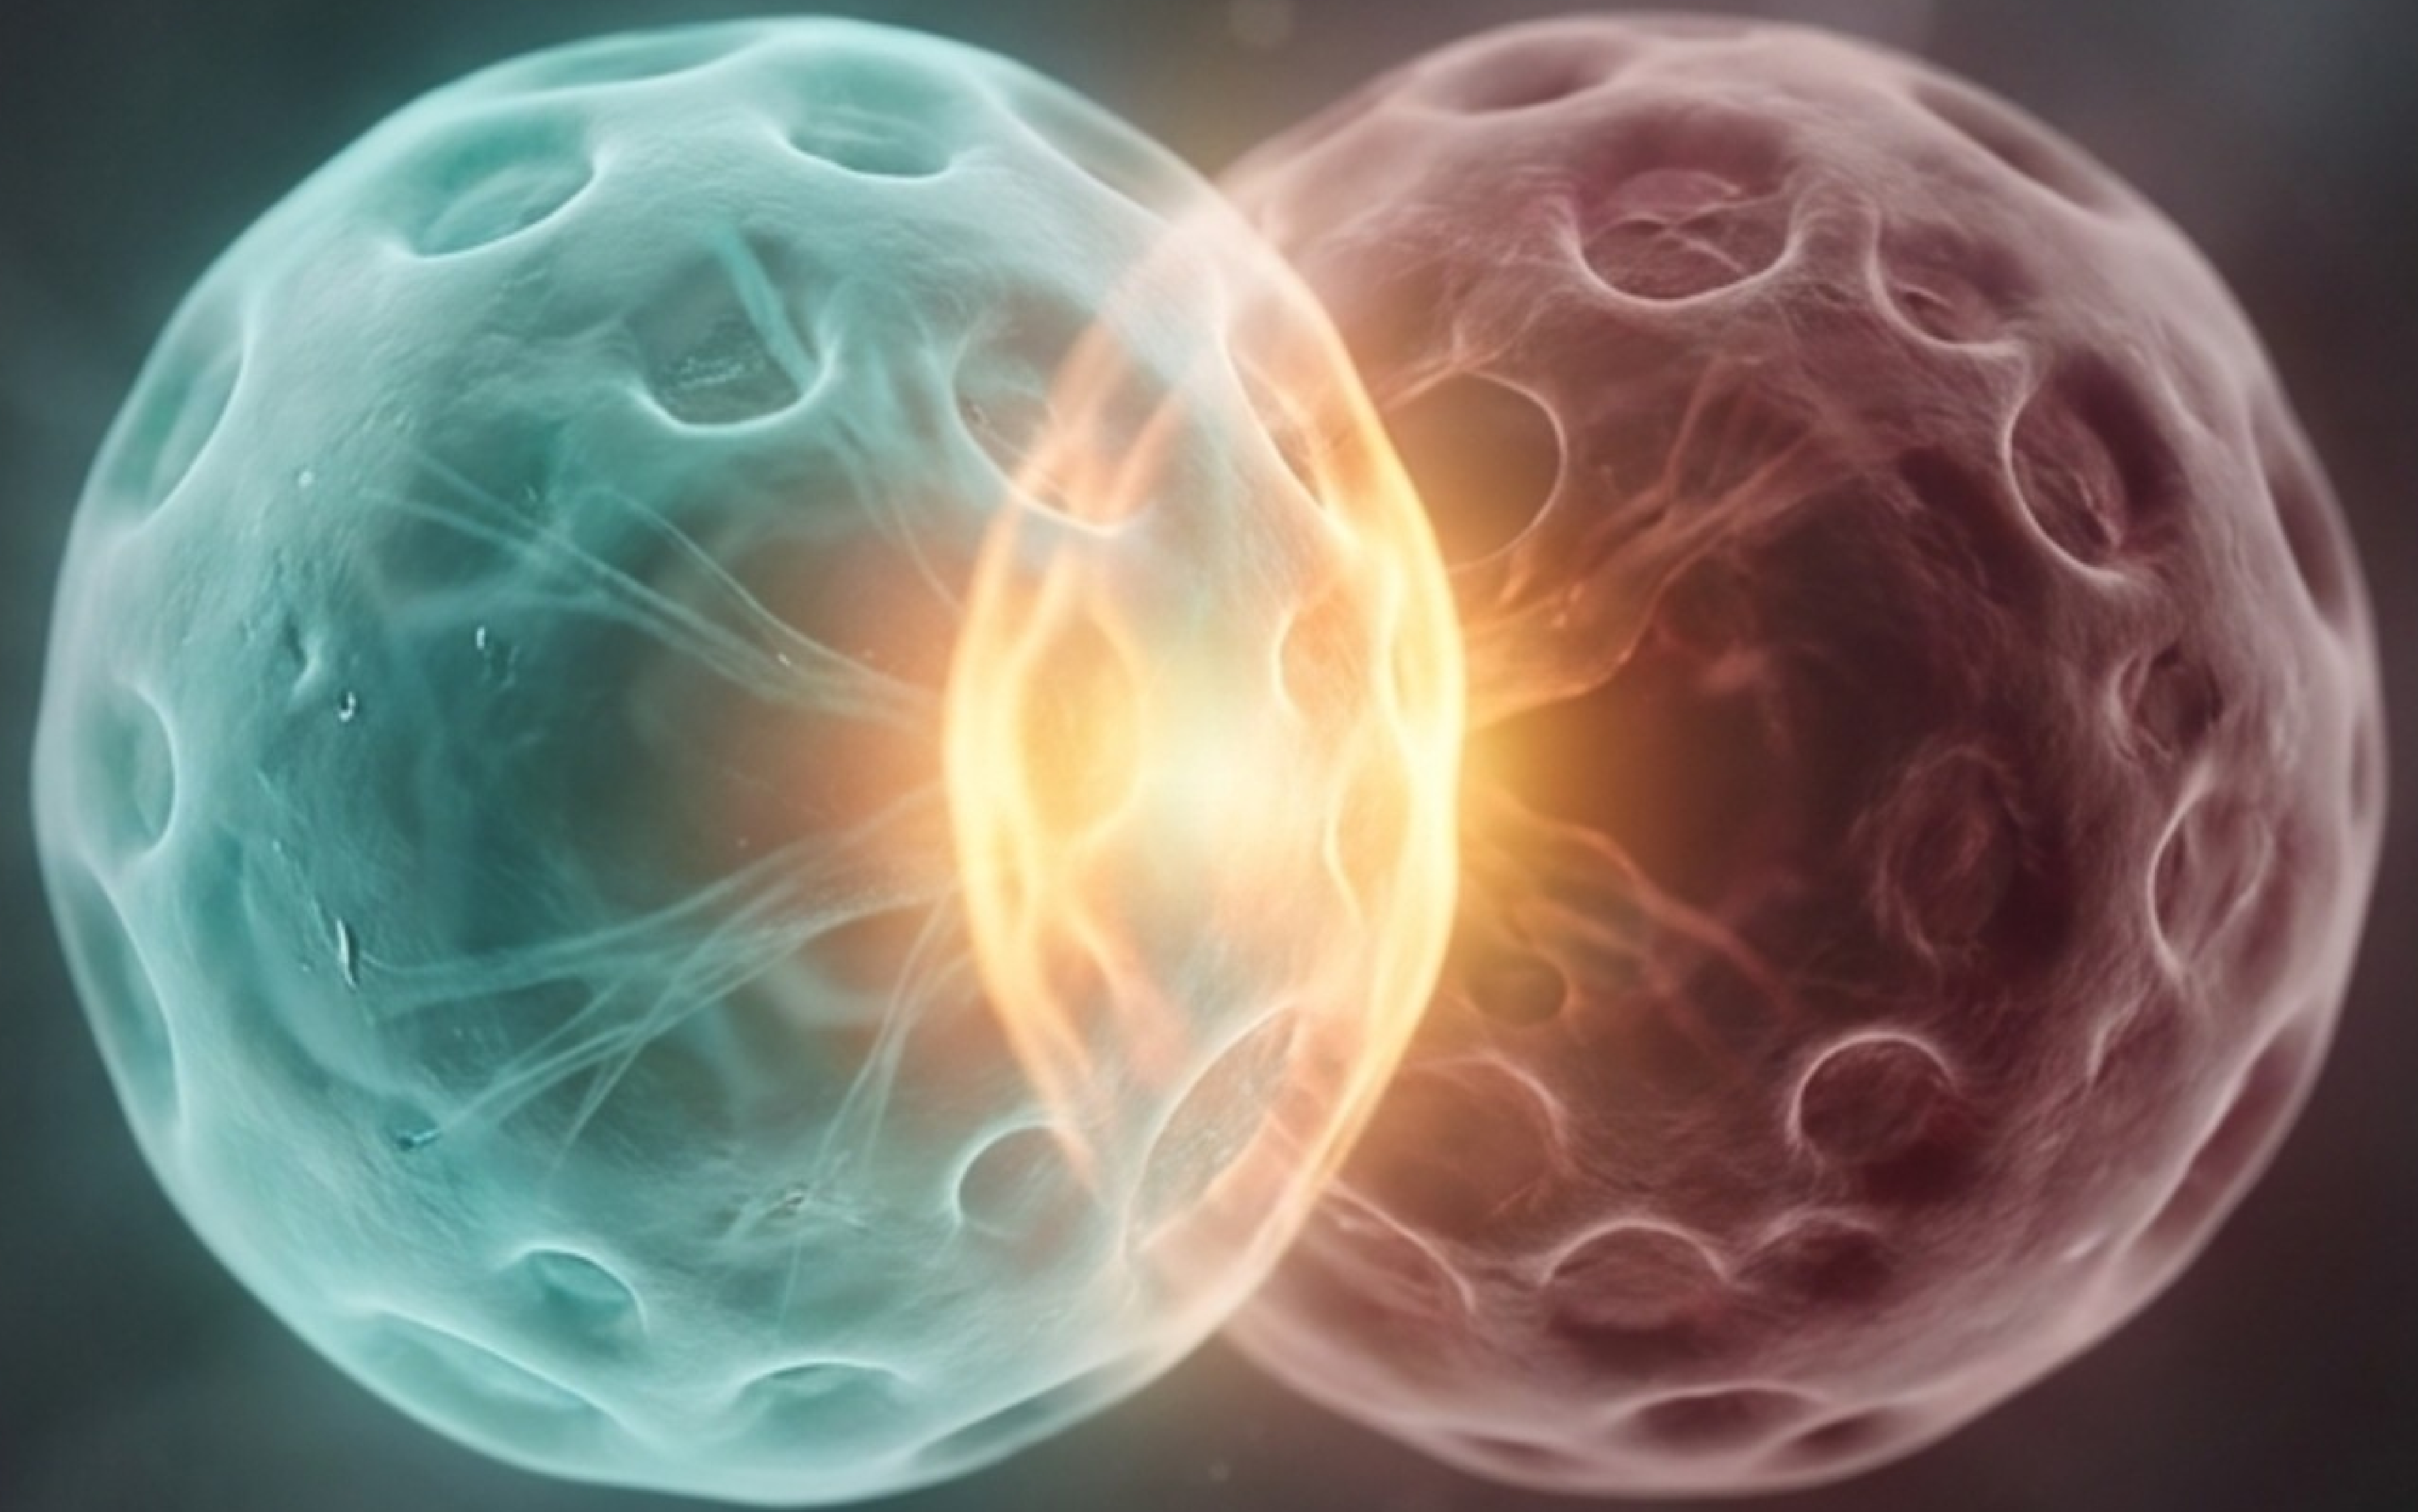

The Opening (Weeks 1–4): Baseline activation. PT-141 produces measurable melanocortin desire response in 30–60 min. Oxytocin's bonding warmth emerges in 15–30 min.

Building Momentum (Weeks 4–8): Pathway sensitization. Desire becomes robust and reliable. The oxytocin-dopamine feedback loop strengthens, deepening emotional intimacy. Provider adjusts dosing.

The Crescendo (Weeks 8–12+): Full ensemble optimization. Integrated physical and psychological arousal becomes a reliable, natural state. Lifestyle protocols compound the benefits.

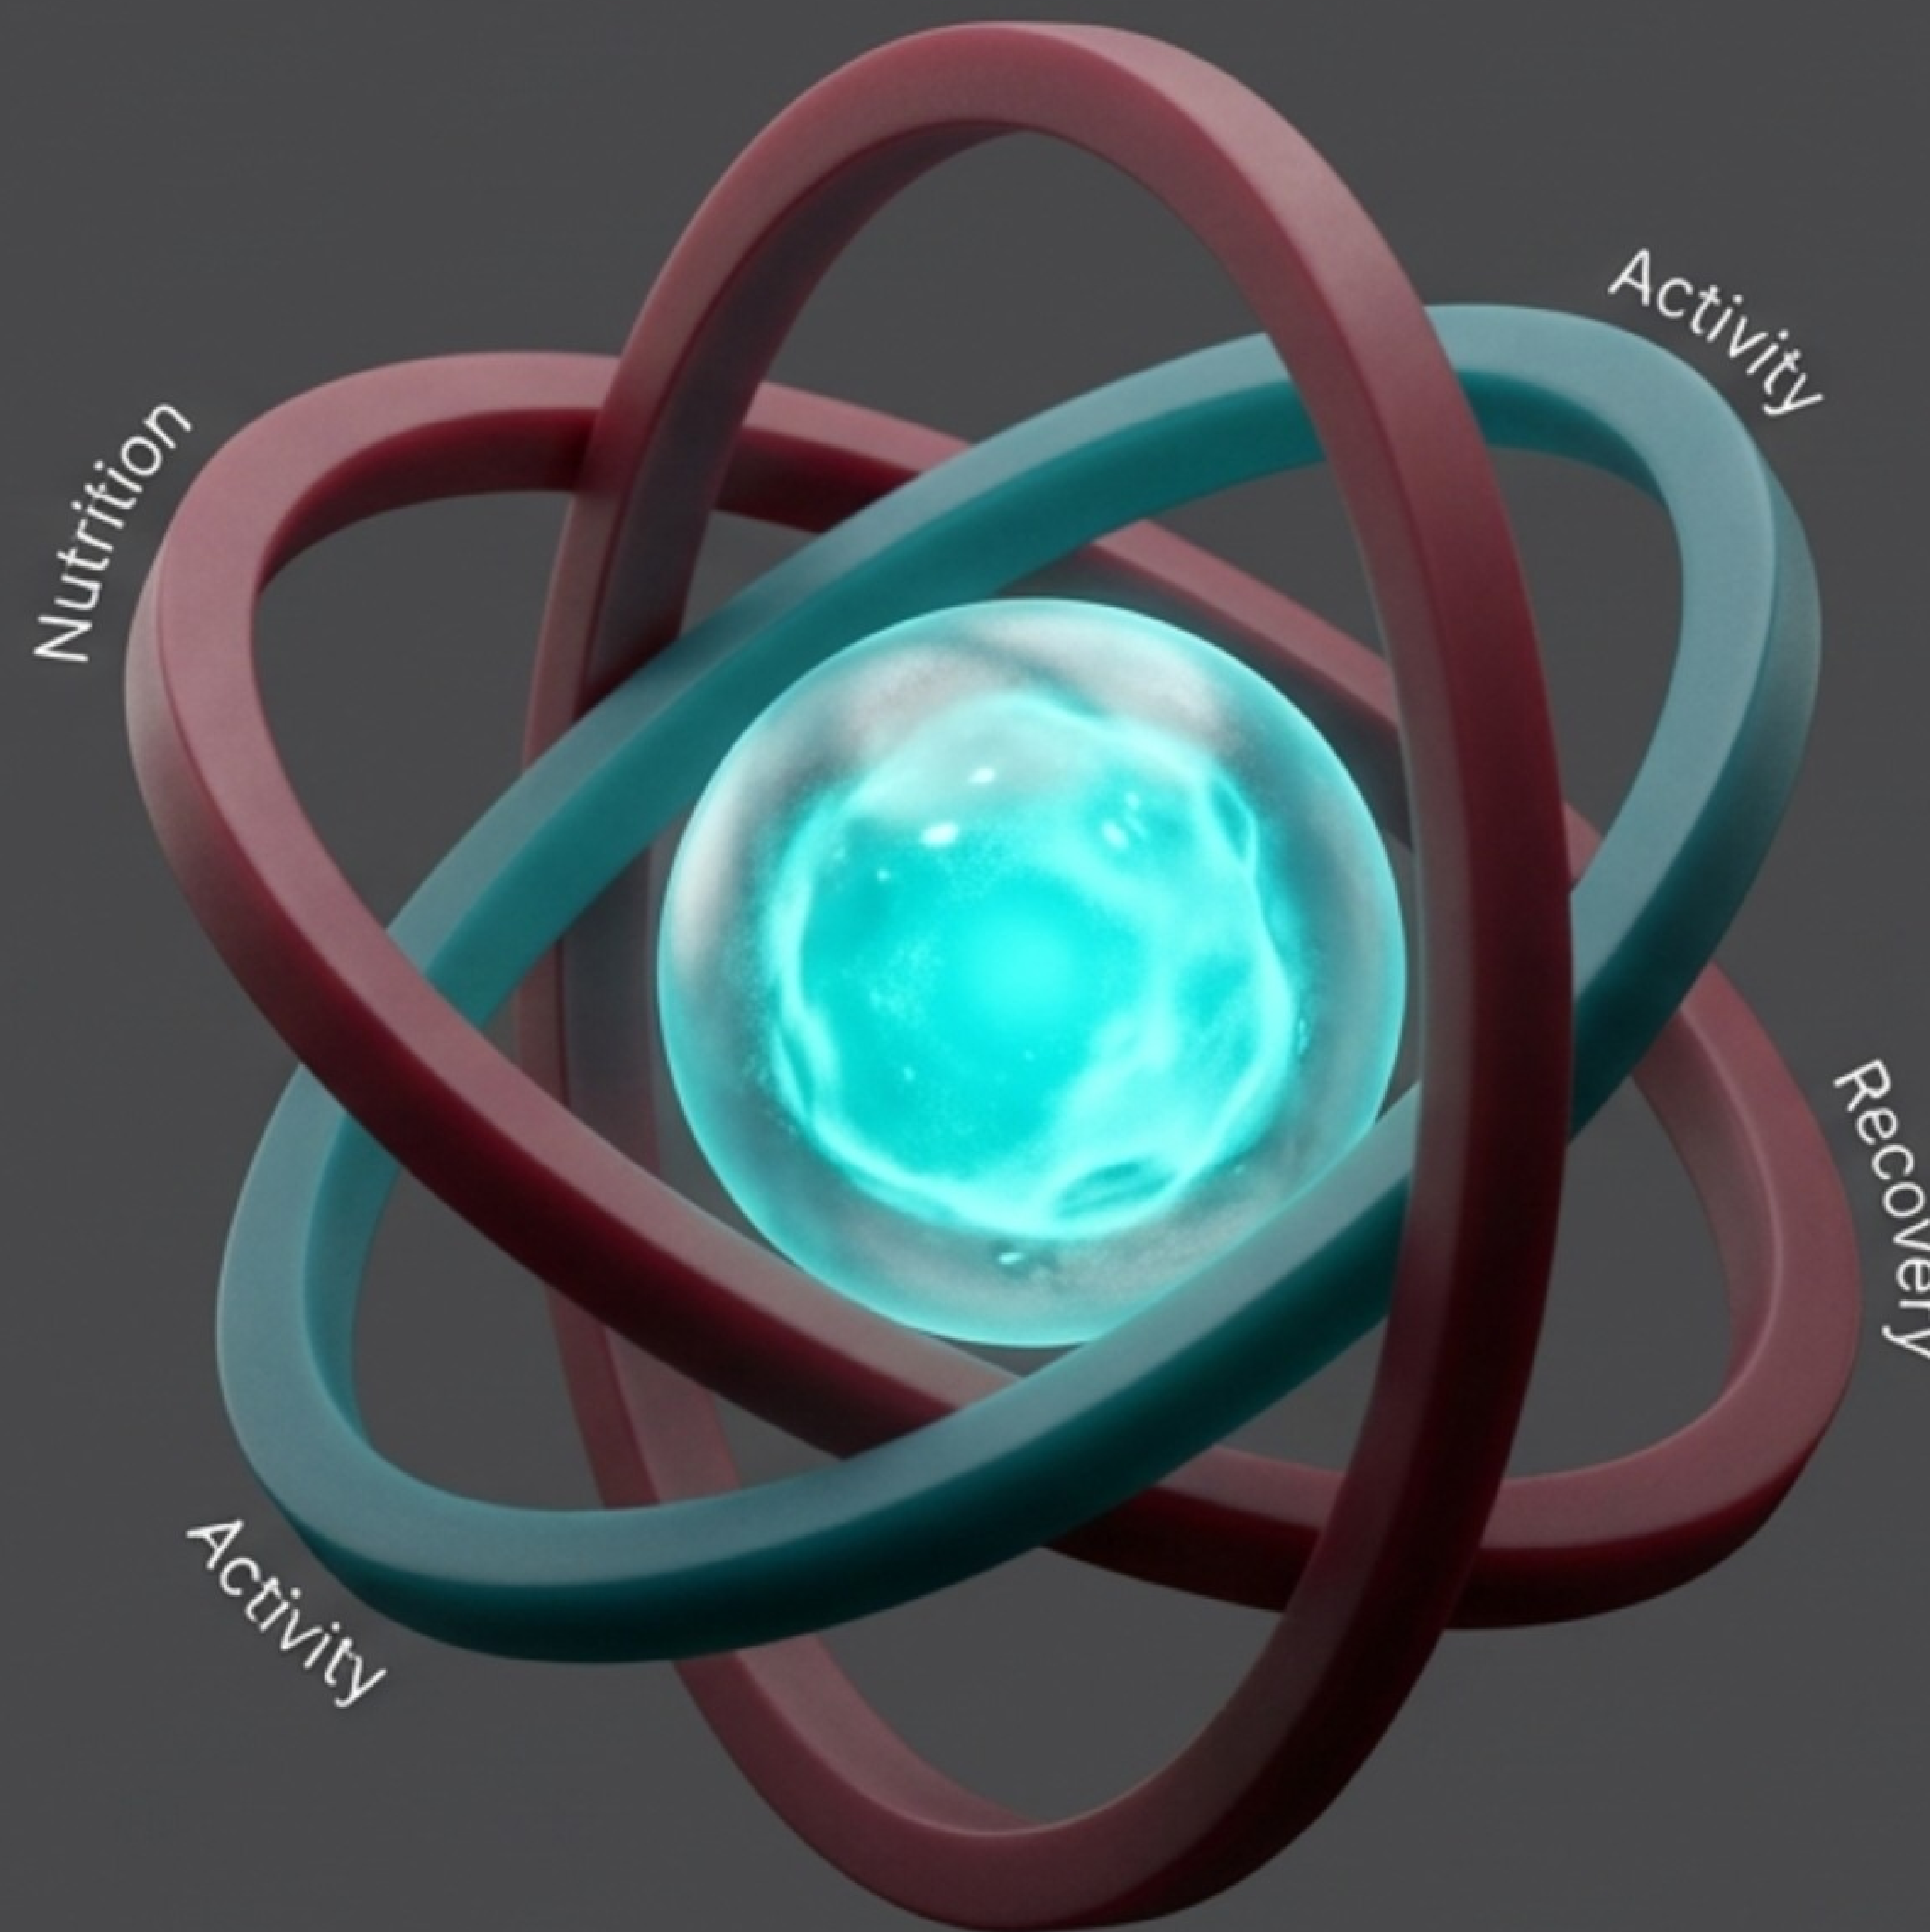

Is This Right for You?

- Experiencing desire or arousal challenges affecting overall intimacy.
- Seeking a rapid, multi-system solution rather than single-agent therapies.
- Highly motivated by partner connection, emotional depth, and bonding.
- Comfortable with a simple, discreet buccal administration.
- Must have no uncontrolled hypertension or complex cardiovascular concerns.
- Ready to optimize health comprehensively with ongoing provider support.

Partnership-Centered Care

- **Specialized Expertise:** Precision curation of intimacy protocols tailored to your biology.
- **Individualized Dosing:** We track your physiological response and adjust the protocol accordingly.
- **Ongoing Support:** Regular follow-ups ensure the blend synergizes with prescribed nutrition, sleep, and activity protocols.
- **Honoring Your Wellness:** Care is delivered with the utmost discretion, compassion, and clinical rigor.

Why Zvia

- **Evidence-Backed:** PT-141 is FDA-approved (Vyleesi); our formulation leverages clinically validated pathways.
- **Multi-Pathway Precision:** We engage three distinct biological systems (Desire, Connection, Neural Environment) to provide one unified solution.
- **Provider-Guided:** The compounds are independently titrated to match your unique biological profile.
- **Integrated Wellness:** Intimacy Blend + Prescribed Lifestyle Integration = Durable, transformative outcomes.
